*To the Mayor, Aldermen, and Council of the
County Borough of Birkenhead.*

GENTLEMEN,

In accordance with the duty which annually devolves upon me, I have the honour of submitting to you my Nineteenth Report to the Health Committee on the Health of Birkenhead, viz., that for the year 1910.

The recurrence of this duty has always been a source of pleasure to me, and this year will prove no exception to the rule, as I am again privileged to record a satisfactory condition of Health in the Borough.

The Report follows much the same lines as in previous years, and will be found to contain a detailed account of the work done by the Public Health Department. It is not necessary for me to say more here.

I have the honour to be,

Gentlemen,

Your obedient servant,

R. SYDNEY MARSDEN,
MEDICAL OFFICER OF HEALTH.

PUBLIC HEALTH DEPARTMENT,

June 10th, 1911.

COUNTY BOROUGH OF BIRKENHEAD

DURING 1910.

SHORT SUMMARY.

Area in Acres	3,850, or a little more than 6 square miles.
Population (at Midsummer)	129,227
Rateable Value	£677,662
1d. in the £ yielded for General Purposes	£2,640
1d. in the £ yielded for Sanitary purposes	£2,440
Number of Persons per Acre (Density of Population)	33·5
Number of Persons per House at time of Census	5·6
Birth Rate per 1,000 living	28·86
Death Rate do.	15·4
Zymotic Death Rate per 1,000 living	1 9
Average Death Rate last 10 years	16·5
Deaths of Children under 1 year of age to 1,000 Births	135
Percentage of Uncertified Deaths	0·6

THE SANITARY CONDITION
OF THE
COUNTY BOROUGH OF BIRKENHEAD
DURING 1910.

*Report of the Medical Officer of Health to the
Health Committee.*

In presenting my Nineteenth Annual Report on the Sanitary Condition of Birkenhead which deals with the year 1910, I have adhered to my former custom of detailing minutely the work done by the different branches of the Public Health Department, and this will be found to have been as thorough and complete as usual.

The Health of the Borough as estimated by the general mortality was in a satisfactory condition, the Death rate of 15·4 per 1,000 being one of the lowest yet recorded, and compares favourably with that of the 24 largest towns, of which Birkenhead is one.

In the chapter dealing with the vital statistics of the Borough considerable alterations have been found necessary owing to the recent census returns altering considerably the previous estimates, and full details will be found on this matter in the later pages. It is this also which has caused some delay in the printing of the report.

The average death rate in Birkenhead during the ten years 1890-1899 was equal 19·4 per 1,000 persons living. During the ten years 1901-1910 it was 16·5, and in 1910 it was 15·4. It is obvious, therefore, that the death rate of the Borough has considerably declined.

The birth rate for the year, 28·86, is satisfactory, being one of the highest rates in the country and higher than the average (25·0) for the 75 provincial towns. The average birth rate in the Borough for the last ten years being 30·5, or 1·6 higher than for 1910.

The Infantile death rate in Birkenhead was considered last year—it is not excessive. In 1910 it was 135 per 1,000 births, one of the lowest rates recorded for the Borough, and 10 below the average of the last 10 years (145), showing a gradual but steady improvement.

In the succeeding pages of this report will be found details of the work carried on by the Public Health Department, together with the vital and mortal statistics of the Borough during the year under consideration, as follows:—

DETAILED STATEMENT OF THE WORK OF THE PUBLIC HEALTH DEPARTMENT DURING 1910.

Ordinary Sanitary Operations.—The ordinary sanitary operations of the Department have continued to receive unremitting attention. House-to-house inspections of the cottage property in the Borough have been regularly made. Gulleys

and passage drains have been periodically cleansed, public fountains, &c., have been scoured and kept in order, and the systematic removal of ashpit refuse at stated intervals has been carefully superintended.

Summary of Nuisances, &c.—The summary of nuisances investigated and dealt with during 1910 is as follows:—

	1910.
Number of nuisances reported	7445
Number of formal notices given	2870
Number abated after formal notice and without proceedings	7445
Number of cases in which proceedings were taken for ordinary nuisances	0
Number abated after proceedings... ..	0
House disinfecting notices... ..	299
Nuisances at houses let in lodgings	227
Nuisances at common lodging houses	25
Notices for cleansing of filthy houses	2

A brief statement of the other measures taken in 1910 for correcting or getting rid of whatever appeared to be prejudicial to health is subjoined.

Sanitary defects reported by the Inspectors and referred for the action of the Borough Surveyor	301
Matters reported to Water Engineer	166
Houses or parts of houses specially disinfected by formalin or other disinfectants	659
Notice to whitewash and efficiently cleanse milk-houses, cowsheds and dairies, given and complied with	375
Offensive privies ordered for conversion into water-closets	2

Parcels of infected bedding and clothes disinfected at the Disinfecting House	740
Parcels of infected or discarded bedding and clothes destroyed	426
Carcases of dogs and cats &c. removed from pools or waste land and buried	36
Deposits of putrid fish and other objectionable refuse removed	2
Total	2707

In addition to the above, the following work has been done:—

Number of excavations made for the purpose of testing the condition of house drains	135
Number of smoke tests applied to drains of premises reconstructed under the supervision of this Department ...	190
Number of water tests applied to drains. ...	156
Number of smoke tests applied to the drains of new buildings, in conjunction with the Borough Surveyor's Department	245

It will be seen from the above that the work of the Department continues to increase, this is in part due to new Acts of Parliament, to the ever-increasing population and consequent greater crowding, and also on account of the more thorough manner in which examinations are now made. The latter tends to the advantage of the public, both as regards health and comfort, and every effort is made to keep down public or private nuisances dangerous to the community.

District Inspections.—The following is a statement of the work done by the District Inspectors of Nuisances and the Disinfecting Inspector during 1910.

				Number of Visits and Revisits made to Insanitary Property.	
District I.—Inspector Croshaw	...	...	...	5038	
„ II.— „ Lee	...	...	...	4007	
„ III.— „ H. T. Taylor	...	...	...	4336	
„ IV.— „ W. H. Tilston	...	...	...	5941	
Disinfecting Inspector Isaac Taylor	...	...	...	3920	
Total				...	23242

Smoke Nuisances.—Observations were taken of the smoke emitted from the factory and other chimneys of the Borough during the year 1910. 1 notice was served for the abatement of a smoke nuisance, and 3 notices were served to raise chimneys.

Inspection of School Premises.

Working in conjunction with the Education Department, I had 34 schools specially examined by the District Inspectors and reported thereon to the Education Committee.

5 special reports were also made with regard to children and their homes arising out of reports sent to me as school medical officer.

Inspection of Common Lodging Houses and Houses let in Lodgings.

The following is a statement of the work performed during the year 1910 by the Inspector of Common Lodging Houses and Houses let in Lodgings, viz :—

REGISTERED COMMON LODGING HOUSES.

Day Inspections	...	...	...	...	4708
Night Inspections	..	...	...	...	616

The total number of registered lodging houses is 18.

REGISTERED HOUSES LET IN LODGINGS.

Day Inspections	...	...	...	...	...	3398
Night Inspections	...	...	...	...	...	230

The total number of houses let in lodgings on the register at the end of 1910 was 672.

FACTORY AND WORKSHOP ACTS,

1901 and 1907.

In connection with the carrying out of the provisions of these Acts, the following is a statement of the work done by the Inspector during the year, viz:—

845 visits have been made to workshops.

306 visits have been made to bakehouses.

78 visits have been made to workplaces.

95 visits have been made to homeworkers' premises.

40 workshops, including 6 bakehouses, have been placed on the register during the year, making a total of 416 up to the end of 1910, of which 61 are bakehouses and 44 are confectioners' shops.

48 workshops have been closed.

4 workshops have been transferred to more suitable premises.

133 nuisances in connection with workshops have been reported and abated.

19 notices have been served for the abatement of nuisance arising out of defective drainage, and 8 for inefficient ventilation.

28 notices to cleanse and limewash the workshops have been served and complied with.

214 occupiers of workshops have limewashed their premises under inspection, but without waiting for the formal notice.

1 case of overcrowding has been reported during the year.

2 workshops have been provided with w.c. accommodation, where none previously existed.

18 failures to affix abstract of the Factory and Workshops Act (s. 133).

Lists of out-workers have been carefully kept, and notices in the form prescribed by the Secretary of State, as given in my Report for 1892 (pp. 57 and 58), have been served when necessary.

Laundries.—241 visits were made during the year to the 58 laundries at present on the register.

Bakehouses.—The duties involved in carrying out the provisions of the Acts relating to the sanitary condition of bakehouses have been put under a special Inspector, and during the year 306 visits have been made to bakehouses.

There has been a very great improvement secured by this systematic inspection.

“Shop Hours Acts, 1892 and 1895.”

In carrying out the provisions of these Acts the Inspector has paid 664 visits to different shops, and the occupiers' names and addresses have been placed upon a register specially kept for the purpose, together with the date of his visits.

Seats for Shop Assistants Act, 1899.

[62 and 63 Vict., ch. 21.]

93 premises have been visited under this Act, and 175 visits made during the year ending 1910.

SHOP HOURS ACT, 1904

CLOSING ORDER WITH RESPECT TO HAIRDRESSERS.

In connection with this Order, 1336 visits have been made. No summons were issued for an infringement of this Order.

Administration of the Factory and Workshop Acts, 1901 & 1907.

IN CONNECTION WITH

Factories, Workshops, Laundries, Workplaces and
Homework.

TOTAL	36	69	7	9	16	18	—	—	—	—	—	—	—	—

INSTRUCTIONS.—If an occupier gives out work of more than one of the classes specified in column 1, and subdivides his list in such a way as to show the number of workers in each class of work, the list should be included among those in column 2 (or 4 as the case may be) against the principal class only, but the outworkers should be included in column 3 (or 5) into their respective classes. A footnote should be added to show that this has been done.

* The figures required in columns 2 and 3 are the total number of lists received from employers who sent them both in February and August as required by the Act and of the entries of names of outworkers in those lists. They will, therefore, usually be double of the number of such employers and (approximately) double of the number of individual outworkers whose names are given, since in the February and August lists of the same employer the same outworkers' name will often be repeated.

4. REGISTERED WORKSHOPS.

Workshops on the Register (s. 131) at the end of the year.	Number.	Class.	Number

The Midwives Act, 1902.

In connection with the carrying out of the provisions of this Act, a great deal of work was done during the year: not only in visiting the homes of midwives, but in interviewing them in connection with their work and explaining the provisions of the Act and the rules laid down for their guidance by the Central Midwives Board.

During the year 1910 some 64 midwives had entered their names on the local register as practising in the borough, being 5 more than in 1909, but names are constantly being added to the roll and there is reason to believe that this number will be considerably added to. Of the above 64, two died and two of them subsequently left the district, and their names have been removed from the register accordingly. Thirteen midwives gave notice of change of address.

During the year I received only three complaints against midwives. All of these were carefully investigated by me and the midwives in question interviewed—in some of these I found the complaints not established. I also interviewed 15 midwives on minor matters where no complaint had been made.

Notices were received from midwives of 40 still births (22 male and 18 female) having occurred; and 36 cases were notified in which medical aid had been called in.

I paid a number of visits of inspection to midwives, and I also inspected the bags and registers of 25 midwives.

I received great assistance in connection with enquiries under this Act from the Female Health Visitors of the Birkenhead Society for the Prevention of Cruelty to Children, and ten special reports were made by them to me in important cases.

CLEANSING OF PERSONS ACT, 1897.

No-one applied to be cleansed under the provisions of this Act, but special baths are provided for this purpose at the disinfecting station in Corporation Road.

Infectious Diseases (Prevention) Act, 1890.

A number of Library books were collected and destroyed from houses where there had been infectious disease.

Seizure and Destruction of Unwholesome Meat, Fish, and Vegetables.

The Meat and Food Inspector has furnished the following particulars of meat, &c., unfit for human food, seized and destroyed during 1910.

The total weight of the meat destroyed amounted to 70,146½ lbs, but of this a large proportion was voluntarily surrendered by the butchers, they having called the Inspector's attention to it.

As in all recent years, a considerable proportion of the meat taken was on premises in connection with the Foreign Animals Wharf, Woodside. The total number of oxen killed at Woodside and inspected by us during 1910 was 90,330, and 304 sheep; and 14 oxen were killed at Wallasey Stage, but nothing was killed at No. 4 Shed, Wallasey, within our jurisdiction. At the Abattoirs in New Chester Road there were killed 1894 beasts, 6027 sheep, 5409 lambs, 442 calves, and 3596 pigs; a total at the Abattoirs of 17,368.

In addition to the above 1163-lbs of potatoes were seized and destroyed as unfit for food.

Tuberculosis.

The following is a Statement of the number of cases dealt with during the year.

	AT WOODSIDE.	THE ABATTOIRS.		Weighing lbs.
		Cattle	Pigs

TOTAL.....	18	12	7	12011

**Proceedings taken under the "Sale of Food and Drugs Acts,
1875 to 1909."**

The Chief Inspector (Mr. William Dawson) gives the following summary of proceedings taken under these Acts during 1910.

The total number of samples taken during the year was 236, viz.—Milk 98, Butter 50, Lard 16, Cheese 15, Beer 12, Lard 8, Coffee 4, Cream 4, Pepper 4, Sweets 4, Malt Vinegar 3, Brandy 2, Compound Liquorice Powder 2, Cream of Tartar 2, Gin 2, Ground Rice 2, Honey 2, Paregoric 2, Port Wine 2, Rum 2, Scotch Whisky 2, Sweet Spirit of Nitre 2, Tartaric Acid 2, Irish Whisky 2, Apricot Jam 1, Black Currant Jam 1, Chocolate 1, Cream Cheese 1, Damson Jam 1, Gooseberry Jam 1, Ground Ginger 1, Potted Shrimps 1.

Out of the above, 8 samples of Milk, 3 of Butter, 1 of Brandy, 1 of Coffee and 1 of Sweet Spirit of Nitre were reported adulterated, and proceedings were taken in 5 cases of Milk, 2 of Butter, 1 of Brandy, 1 of coffee and 1 of Sweet Spirit of Nitre.

With reference to the remaining samples reported adulterated the Health Committee considered it was inadvisable to institute proceedings.

Included in the 236 samples purchased during the year, 10 samples were taken informally and analysed and found correct, with the exception of Butter sample No. 161, which was reported to contain over 10 per cent of Foreign Fat. In this case, upon a further sample being taken formally, the Butter was reported to be pure, and the premises are being kept under observation.

In addition to the samples analysed, 1 sample of coffee, 2 of Margarine and 4 of Lard were purchased, but not forwarded to the Analyst owing to proper notice being given at the time of purchase.

The particulars respecting the samples in which proceedings were taken are as follows:—

Quarter Ending	No.	Article.	Amount of Adulteration.	Fine Inflicted.	Costs Imposed.
1910.				£ s. d.	£ s. d.
June 30	82	Milk ..	3 % added of water ..	Withdrawn (vide note below)	0 16 6
" "	83	Milk ..	4 % added of water ..		1 0 0
" "	86	Milk ..	Deficient of 10 % of fat		
" "	88	Milk ..	Deficient of 13 % of fat	0 10 0	0 17 0
" "	90	Milk ..	Deficient of 20 % of fat	1 0 0	0 19 0
December 31 .. .	181	Coffee ..	10 % of Chicory ..	Dismissed, with severe caution	
" "	202	Brandy ..	27 degrees under Proof or 2 deg. more than is allowed by Act of Parliament	0 10 0	0 17 0
" "	224	Butter ..	Margarine	0 10 0	0 17 0
" "	230	Sweet Spt of Nitre ..	Deficient 22 % of Ethyl Nitrite	Magistrates found sample was deficient in 22 % of Ethyl Nitrite but Vendor sold it in same condition as when received and successfully relied on his warranty. Case dismissed.	

MARGARINE ACT, 1887.

The following proceedings have also been instituted under Section 6 of the Margarine Act, 1887.

June 30.. .. .	63	Lutter ..	Margarine not labelled so as to be clearly visible to purchaser, and Margarine sold in an unlabelled paper wrapper	0 10 0	0 17 0
" "				0 10 0	0 6 6
December 31 .. .	224	Butter ..	Margarine not labelled so as to be clearly visible to purchaser, and Margarine sold in an unlabelled paper wrapper	..	0 3 0
" "				..	0 3 0

NOTE.—In the case of Sample No. 86, reported to be deficient in fat to the extent of 10 per cent, the proceedings taken against the Shop-keeper were withdrawn, inasmuch as upon a sample No. 90 being taken in course of delivery from the Farmer supplying the Shop-keeper, the milk was found to be deficient in fat to the extent of 20 per cent. Proceedings were instituted against the Farmer, who was convicted and fined as above stated.

Contagious Diseases (Animals) Act, 1886.

The Milkhouses.—The regulation of dairies, cowsheds, and milk-shops, and the supervision of milk-sellers, has had systematic attention for a number of years. Special care is taken that the ventilation, lighting, cleansing, draining, and water supply of premises used for milk-trade are thoroughly efficient. The register of milk-sellers is revised week by week. The total number of milk-shops is 205, in addition there are 13 purveyors of milk, 9 cowsheds, and 52 farmers resident outside the Borough, registered to purvey milk inside the Borough.

Twice every year notice is sent to all the milk-sellers requiring that the walls and ceilings of every room in the occupation of Registered Milk-sellers, used for storage or sale of milk, shall be lime-washed, that is to say, in March and September; but if the walls are painted, then they must be washed and thoroughly cleansed twice every year, in March and September.

Meteorological Results.

The noteworthy features of the meteorology of the year are given in the following tabular statement, which has kindly been prepared by W. E. Plummer, Esq., M.A., F.R.A.S., Director of the Observatory, Bidston Hill, Birkenhead, who also furnishes particulars weekly of the daily observations taken under his directions, from which Table IV. in the appendix is compiled.

1910				Mean Tempera- ture	Mean Barometer	Rainfall 1 ft. above ground
				°	Inches	Inches
January	..	..	..	39.1	29.769	2.168

Mean Barometer for the whole year=29.846 inches.

Mean Barometer for the past 40 years=29.922 inches.

Total amount of rainfall at Bidston, 1910=28.585 inches.

Number of wet days in the year 1910=227 days

Average rainfall for last 40 years=28.600 inches.

Barometer.—The mean barometer of 1910 (29·846 inches) was lower than last year and 0·076 lower than the average mean for the last 40 years. Detailed particulars respecting the barometric pressure, temperature, rainfall, wind, humidity of the air and the proportion of cloud to clear sky &c., will be found in Table IV.

Rainfall.—The rainfall of 1910, 28·585 inches, was higher than last year and about the average of the previous 40 years.

Year.	Total Amount Rainfall in inches at Bidston	No. of wet days in the year
1901	25·192	190
1902	25·566	200
1903	34·418	224
1904	25·175	196
1905	24·011	192
1906	28·076	196
1907	26·568	209
1908	28·902	190
1909	28·447	202
1910	28·585	227

Average rainfall for 40 years=28·6 inches.

The figures for the years 1867 to 1899 are given in my Report for 1901, and for 1886 to 1909 in my Report for the latter year.

For the relative mortality of different portions of the year, see under Births and Deaths.

PREVALENCE OF ZYMOTIC SICKNESS DURING 1910.

Notification of Cases of Dangerous Infectious Diseases.—The Infectious Disease Notification Act, 1889, requires householders and medical men in attendance to notify cases of dangerous infectious diseases to the Sanitary Authority, and gives facilities for supplementing the statement of the mortality from zymotic diseases, month by month, as they were reported. The diseases which require to be notified to the Authority as “dangerous infectious diseases” are:—

Small-pox.
Scarlatina.
Diphtheria.
Membranous Croup.
Erysipelas.

Fevers { Typhus.
Typhoid.
Continued.
Relapsing.
Puerperal Septicæmia.
Cholera.

The cases notified appear in the following return, showing that 562 cases were notified during the year, being 353 less than the number notified last year.

The notification of Measles was discontinued after 7th August, 1907.

The following Table gives the number of Notifications of Dangerous Infectious Diseases in each month of the year.

1910.	Smallpox	Scarlatina	Diphtheria	Typhus Fever	Typhoid Fever	Puerperal Fever	Fever	Cholera	Mem. Croup	Erysipelas	Total

1910	7	..	291	130	..	30	5	10	..	89	562

The figures for the years 1882-1905 will be found at page 25 in my report for 1905.

In addition to these there were three cases of cerebo-spinal meningitis notified.

Small-pox.

Seven cases of Small-pox were notified during the year. Of these 3 cases occurred in one house, and two cases in the Workhouse resulting from one of these cases—a special report was sent to the Local Government Board giving particulars of the cases at the time, and it is not necessary to go further into the matter again here. After the first case was recognised as a case of Small-pox, so complete were the precautions taken that no spread of the disease occurred in the town with the exception of the father and mother of the child, who slept with him in the same room. How the two cases came to get infected at the Workhouse it is not for me to say, as I am in no way responsible for that Institution. Subsequently two other cases were notified as being in the Workhouse; these had been sent in from Wallasey, and were returned to the Small-pox Hospital of that Borough.

VITAL AND MORTAL STATISTICS FOR THE YEAR.

Area.—The Borough has an area of 3850 acres, or a little more than six square miles.

Population.—The Census was taken in England and Wales on April 2nd, 1911, and the result as given in the Preliminary Report on the same showed the number of persons in Birkenhead to be 130,832, being 19,917 in excess of the number enumerated in the Census taken on April 1st, 1901. The complete Census Report has not yet been issued.

For the purposes of this Annual Report an estimate is required of the number of persons living at Midsummer,

1910, and I have estimated that on the 30th June of that year the population was 129,227, and on this estimate have based the following statistics.

Previous to the taking of the Census the estimate of the population of the Borough given by the Registrar-General, based on the Census of 1901 was 122,232 on the 30th June, 1910, or about 6995 less than the actual number. This estimate would have been accurate had the population increased at the same rate during the decennium 1901-1911 as it did during the decennium 1891-1901. The increase in the population during 1891-1901 was 11,058, *i.e.*, 11·08 per cent, while during 1901-1911 it was 19,917, *i.e.*, 17·95 per cent.

At the time of the 1901 Census the number of inhabited houses was 19,744, giving an average number of persons per house of 5·6; but I have not yet got the return of the number of houses in the Borough at the time of the 1911 Census.

The total number of houses in the Borough at the time of the 1901 census was 21,172, and the number built since that time up to 31st December 1910 was 5610, and the number demolished in the same period was 395, a net gain of 5215, giving a total for the Borough at end of the year 26,387. But there are a number of houses in different parts of the town which, though not demolished, have been converted from dwelling houses into factories, stores or other workshops; of these I have no return and can only guess at their number, which I estimate will be between 300 and 400.

I am indebted to the Chief Constable (W. S. Davies, Esq.) for the following Return of uninhabited property in the Borough of Birkenhead for the half year ending 31st December, 1910:—

District	Half-year ended 31st Dec., 1910.					Half-year ended 30th June, 1910.

				—
Total		..	...	5610

The number of houses demolished since taking of Census to end of 1909 was 388, and 7 were taken down during 1910, a total of 395.

From January 1st, 1901, to December 31st, 1910, there were 36,606 births in the Borough and 19,873 deaths, giving an excess of 16,713 births over deaths as representing the natural increase. But the *actual* increase of population during ten years was 19,917, a difference of 3204, so that this number represents the immigration into the town, a healthy sign of progress.

There is no doubt that a considerable population has also spread itself into the districts just over our boundaries in the townships of Bidston, Noctorum, Prenton, and Higher and Lower Bebington, and these townships are practically a part of the Borough of Birkenhead.

The population of these townships in 1901 was 11,039, and at the recent census it was 15,540 an increase of 4,501.

The Health returns and the Birth and Death rates for the Borough are in every way satisfactory, and it will be a matter of gratification to the Health Committee to find that notwithstanding the steady growth in the population which is taking place, and the consequent considerable increase of density, or in other words, number of persons per acre, yet their efforts to maintain a high state of sanitation in the Borough have borne fruit in a marked degree, and in a continued improvement in the public health.

It must be remembered that increase of the density of population in the absence of the counteracting influence of sanitary work would probably have greatly increased the mortality, and the improvement indicated could not possibly have taken place.

The following table gives the estimated population of the Borough during the years 1911-1920, provided the rate of increase continues as during the last ten years.

Year.	Midsummer Population.	Year.	Midsummer Population.
1911	131377	1916	142686
1912	133565	1917	145062

1914	138049	1919	149934
1915	140348	1920	152430

Births and Deaths in Birkenhead.—During the year 1910 the returns of the local registrars recorded 3730 births and 1993 deaths in the Borough of Birkenhead. The natural increase in the population in 1910 was therefore 1737. Of the births 1911 were males and 1819 were females; of the deaths 1040 were males and 953 were females.

Further particulars as to the births and deaths in the Borough registered in each quarter of the year, and in each township are given in the subjoined table. Those occurring in Union Workhouse are entered separately.

The next table shews the estimated population of Birkenhead, the density of population and the number of births, deaths and zymotic deaths, and also the birth and death rates deducible from these figures for the years 1900 to 1910. These figures for the years 1878 to 1899 were given in my reports for the years 1898 and 1899. This table has been revised since the figures of the 1911 census have been published.

Year	Revised Estimated Population at Mid-summer	Persons per acre.	BIRTHS.		DEATHS.		ZYMOTIC DEATHS.	
			Number of Births	Birth rate per 1000 per annum	Number of Deaths	Death rate per 1000 per annum	Number of Deaths	Death rate per 1000 per annum

1910	129,227	33.56	3730	28.86	1903	15.4	251	1.9

The proportion of Deaths of Infants under One year to the Births registered.—The proportion in Birkenhead Borough in 1910 was equal to 135 per 1000. It varied greatly in the different towns in the N.W. District. In Liverpool it was 139, Wallasey 86, Bootle 123, Stockport 137, Blackburn 136, Burnley 168, Bolton 116, and so on. The full returns have not yet been issued and therefore cannot be compared.

equals 144.

Birth-rates and Death-rates in forty-three great towns in England.—In order that the birth-rates and death-rates of the Borough of Birkenhead in 1910 may be compared with the corresponding rates of the most populous cities and boroughs in England, the following table has been compiled from Returns kindly sent me by the Medical Officers of these towns. The table gives the revised *estimated* population of the forty-three large towns at Midsummer, 1910. For comparative purposes these figures are interesting, as they are all calculated on the same basis. (*See Table on page 31.*)

Table shewing revised Birth Rates and Death Rates
in the 43 great Towns.

For this year the following information* may be of interest

THE CENSUS, 1911.

England and Wales.

The summary of the figures obtained at the recent Census, according to the preliminary examination of the returns, was issued with the Parliamentary papers of May 25th. The figures are annexed to an answer by Mr. Burns, the President of the Local Government Board, to a question by Dr. Addison. Mr. Burns points out in his reply that the figures for 1911 are subject to correction, being the provisional numbers derived from summaries furnished by the local Registration Officers. The following results are shown in Mr. Burns' statement:

The population of England and Wales has					
increased since 1901 by	...	...	...	...	3,547,426
Equal to	...	...	...	...	10·91 per cent
The increase is made up as follows:					
England	...	...	...	...	3,286,640
Wales	...	...	...	...	260,786
					3,547,426
The 62 administrative counties show an					
increase of	...	...	...	...	2,660,014
Equal to	...	...	...	...	11·80 per cent
The 75 county boroughs show an increase of					887,412
Equal to	...	...	...	...	8·89 per cent
In the County of London there is a decrease of					13,306
Equal to	...	...	...	...	0·29 per cent
In Greater London there is a increase of					684,867
Equal to	...	...	...	...	10·20 per cent

Previous Census Returns.

At the Census of 1901 the increase of population, as compared with the Census of

1891, was	...	...	...	...	3,525,318
Equal to	...	...	...	...	12·17 per cent

The present rate of increase, 10·91 per cent, is the lowest ever recorded since the first general Census was taken in 1801. The numbers and percentages on previous occasions were :

—	Population	Rate of Increase
1801	8,892,536	—
1811	19,164,256	14·00
1821	12,000,236	18·06
1831	13,896,737	15·80
1841	15,914,148	14·27
1851	17,927,609	12·65
1861	20,066,224	11·90
1871	22,712,266	13·21
1881	25,974,439	14·36
1891	29,002,525	11·65
1901	32,527,843	12·17
1911	36,075,269	10·91

* From British Medical Journal, 3rd June.

Tabular Statements.—In the appendix to this Report are tabular statements of the year's mortality within the Borough, classified according to the diseases, ages and localities, a weekly register of deaths and of meteorological results, together with a return of the deaths in the Birkenhead Union Hospital and Workhouse, etc.

Table I. shows the deaths registered in the whole Borough during 1910, arranged with reference to the age at which death occurred in each case. They are disposed in four sub-tables—the deaths in the townships of Birkenhead and Cloughton in the first, deaths in Tranmere (exclusive of the Union premises) and Oxten in the second, the deaths in the incorporated portion of Higher Bebington in the third, and the deaths in the Union Hospital and Workhouse in the fourth. The deaths of infants are entered up in three columns—those under one year, those of one year and under two years, and those turned two years and under five. Then follow the deaths of children and young persons, those turned five years and under twenty; and of adults those turned twenty and under forty, and those turned forty and under sixty. In the last two columns are the deaths of old people, those turned sixty and under eighty, and those of eighty and upwards. Reference to this table will show that, of the gross local mortality for 1910, the deaths of infants under one

year of age accounted for 507, those over one year but under five years of age 273, children and young persons 119, adults 547, old people sixty years of age and upwards 547.

The relative proportion of deaths in 1910 among the infants, children and young persons, adults and old people, to the whole number of deaths, in certain sub-divisions of the borough, in the premises controlled by the Guardians of the Poor, and in the entire incorporated area, is readily shown in tabular form, thus :—

Percentage of Deaths at certain ages to Total Deaths.	Under 1 Year	Age between														85 years and upwards.
		1-2	2-3	3-4	4-5	5-10	10-15	15-20	20-25	25-35	35-45	45-55	55-65	65-75	75-85	
Birkenhead and Claughton	16.00	6.02	2.30	0.75	0.80	1.55	1.15	0.80	1.25	2.10	2.80	4.16	4.81	5.77	2.40	0.55
Tranmere & Oxtun	7.97	2.20	0.55	0.60	0.20	0.80	0.45	0.25	0.35	1.50	1.75	3.06	3.46	3.51	2.25	0.55
Bebington	0.30	0.15	..	..	..	0.05	0.05	0.05	..	0.10	0.20	0.20	0.55	0.65	0.20	0.15
Union Hospital and Workhouse	1.15	..	0.05	0.05	..	0.15	0.15	0.50	0.40	1.25	1.50	1.49	2.55	3.11	2.00	0.25
Birkenhead Borough	25.43	8.37	2.90	1.40	1.00	2.55	1.80	1.60	2.00	4.96	6.27	8.83	11.38	13.04	6.87	1.50

In this respect the local mortality compares favourably with the mortality in most great cities and boroughs. The percentages taken out for Bebington have little significance, the number of deaths being so small.

Table II. is the weekly register of deaths in the Borough of Birkenhead for 1910. The deaths are entered as in Table I., into four sub-tables, representing Birkenhead and Claughton, Tranmere and Oxtun, Bebington, and the Union Hospital and Workhouse. Table III. is a summary of the weekly register of deaths. Table IV. is a Weekly Condensed Register of Meteorological Results. Table V. is a street register of deaths.

The Classification of Death Causes.—The causes of death, as they appear in Tables I. and II. in the appendix, are systematically classified according to the principles laid down by the late Dr. W. Farr, the nosology being that adopted by the Registrar-General until within the last few years, which experience has shown to be well suited for statistical purposes. The death causes are arranged under classes and orders, the latter corresponding to the families of Natural History. Genera, or what in

diseases would be varieties, are not distinguished. All death causes are thus conveniently classified under 116 heads, some of which however, include diseases very distinct from one another.

At the beginning of Table I. are the totals of deaths from all causes, and on the next line the totals of deaths from specified causes. The deaths which it is necessary to refer to unspecified causes are not only those ascribed in legal phraseology, to "visitation of God" or "natural causes," but those which, with almost equal vagueness, are classified as due to "tumour," "coma," etc. The deaths from specified causes are then divided into five classes. Class I. (the zymotic) embraces all diseases, either epidemic, endemic or contagious, which are induced by some specific body, or by want of, or by the bad quality of food. The diseases coming under Class II. (constitutional or cachetic) appear to be due to a bad habit of body, and possibly may sometimes be hereditary. Class III. takes in diseases the effects of which are manifest in disturbing or obliterating the function of particular organs or systems. Class IV. includes the conditions tending to produce death which are the incidental results of the formative, reproductive and nutritive processes. Class V. groups together all deaths which are the evident and direct result of physical or chemical forces.

Deaths from Zymotic Diseases. The deaths from zymotic diseases include 75 by what have been termed the chief zymotics (certain diseases belonging to the miasmatic order), viz., measles 34, scarlatina 5, diphtheria 19, membranous croup 4, fevers 11, and puerperal septicæmia 2. The remaining 176 were entered to what have been called minor zymotics (diseases less prevalent, less fatal, or less obviously zymotic in character), viz., whooping cough 34, erysipelas 5, influenza 21, diarrhœa 78, syphilis 5, and other zymotic diseases 3.

Relative Fatality of Chief Zymotic Diseases.

The following table shows at a glance the relative fatality of the chief zymotic diseases for the year on the corrected estimate of population.

Year	Deaths from Zymotic Diseases.								Death rate per 1000 living.							
	Smallpox	Measles	Scarlatina	Diphtheria	Whooping Cough	Typhus Fever	Typhoid Fever	Diarrhoea	Smallpox	Measles	Scarlatina	Diphtheria	Whooping Cough	Typhus Fever	Typhoid Fever	Diarrhoea

1909	127108	137	1.07	81	0.63	56	0.44	41	0.32	21	0.16	49	0.38
1910	129227	152	1.17	98	0.75	54	0.41	41	0.31	31	0.23	49	0.37
Totals	131096	1734	1.31	985	0.74	749	0.57	254	0.18	178	0.12	306	0.22

The Phthisis Death Rate for the last 10 years is 1·31 per 1000, equal to 170 deaths per year. The Phthisis Death Rate for 1910 is 1·17 per 1000, equal to 152 deaths per year; so that at least 18 lives were saved from this disease during the year, which would have died had the average rate of the last 10 years been maintained. It is gratifying to find the slow but steady decline in the Phthisical Death Rate which is taking place as the result of sanitary administration, and which we hope to still further reduce.

Inquests.—The number of inquests held during 1910 was 123, thus 6 per cent. of the sum of the deaths in the Borough formed the subject of official enquiries. Out of the 123 inquests held, none were upon the bodies of infants whose deaths were due to being overlain.

Deaths not Certified.—Not all the death causes which are classified represent diseases or symptoms observed and certified by medical men in attendance during the last illness, or verdicts following official investigation. A significant proportion of the death causes are entered in the register on the doubtful testimony of deceased persons' relatives or friends, or fellow lodgers. The registrars have, therefore, been required to mark in the returns furnished, every death not certified by a registered practitioner, or made the subject of a coroner's inquest. In 1910, out of the 1,993 deaths registered, 13 were marked "not certified," that is 0·65 per cent. The causes of the 13 deaths were entered in accordance with the statements of persons giving information to the registrars as follows:—

Heart Disease	...	...	...	...	...	2
Old Age	...	...	...	...	...	2
Bronchitis	...	...	...	...	...	2
Debility	...	...	...	...	...	1
Convulsions...	...	...	...	...	...	1
Gastritis	...	...	...	...	...	1
Rupture of Blood-vessels	...	...	...	...	...	1
Premature Birth	...	...	...	...	...	1
Diarrhœa	...	...	...	...	...	1
Influenza	...	...	...	...	...	1

though how such conclusions were arrived at does not appear. In my opinion such deaths ought not to be registered without a Coroner's certificate.

The proportion of uncertified deaths to the sum of the deaths was as already stated, 0·65 per cent. as compared with 0·41 per cent. in 1909.

Deaths classified according to Localities.—Tables I., II., III., and IV., in the appendix, having been fully discussed, are

followed by Table V., in which the deaths registered during 1910 are classified according to the localities in which they occurred. Opposite each street or place is the number of deaths from all causes and from zymotic diseases, registered as occurring in that street or place during the year. As it was felt that particulars of the number of deaths from all causes and zymotic diseases in each ward would prove interesting, and as the Street Register does not afford this information, the Table here sub-joined has been drawn up.

1910	Estimated Population at Midsummer, 1910.	Deaths from All Causes		Deaths from Zymotic Diseases		Death rate per annum.	Infantile Death Rates per 1000 Living
		M.	F.	M.	F.

Birkenhead Borough in- cluding deaths in Union premises	129227	1040	953	120	131	15.42	3.9

Illegitimacy.—Statistics relating to illegitimacy are important, not merely on account of the bearing which such a subject has upon the social life of the community, but also with a view ultimately of showing to some extent the influence which illegitimacy exerts upon the “chances of life” of infants, as it is well known that the death-rate of illegitimate children is considerably greater than that of those born in wedlock. I have thought it desirable, therefore, to continue these statistics in this report, as the subject is one of some interest.

The following table gives the total number of legitimate and illegitimate births, with the rates per 1000 of births and per 1000 living, and statistics relative to the deaths of such children under one year of age.

Illegitimate Births and Deaths, 1910.

Registrar's Sub-District	Estimated Population 1910.	BIRTHS		ILLEGITIMATE BIRTHS		Total deaths of children under one year of age	Deaths of illegitimate children under one year of age	Percentage of deaths of illegimates to total deaths under one year of age

HOUSING OF THE WORKING CLASSES ACTS, 1890 to 1909.

Under the provisions of these Acts during the year 1910, no action was taken.

I am, Gentlemen,

Your obedient servant.

R. SYDNEY-MARSDEN,

Medical Officer of Health

PUBLIC HEALTH DEPARTMENT,

TOWN HALL.

June 10th, 1911.

THE INFECTIOUS DISEASES HOSPITAL,
TOLLEMACHE ROAD.

Report for the Year 1910.

HOSPITAL VISITING SUB-COMMITTEE.

MR. ALDERMAN E. G. MASON, J.P., Chairman.

MR. ALDERMAN H. L. PEARSON, J.P., M.R.C.S.

MR. ALDERMAN THOMAS SHAW.

MR. COUNCILLOR MICHAEL BYRNE.

MR. COUNCILLOR ARNOLD BLOOM.

MATRON:

MISS EMILY YEOMANS.

There has been no addition to the number of beds in the hospital during the year, nor has there been any change in the number of the Staff.

The total number of patients treated in the hospital during the year (January 1st to December 31st) was 269; of these 236 were admitted during the year, and 33 remained in hospital from 1909. Out of those admitted 16 died, giving a death-rate of 6·7 per cent., a much higher percentage than usual. This was due to the unusual severity of some of the cases, and the small number of cases, which makes one death even considerably enlarge the percentage.

The following table gives a summary of the cases treated in the hospital during the year 1910, along with the results obtained.

DISEASES	M.	F.	Re-covered		Died	
			M.	F.	M.	F.
Scarlet Fever—remaining ..	11	19	11	19	..	..
admitted ..	80	86	77	86	3	..
Typhoid—remaining ..	1	2	1	2	..	..
admitted ..	3	4	3	1	..	3
Diphtheria—admitted ..	27	30	23	26	4	4
Laryngismus Stridulus ..	0	1	0	1	..	..
Tuberculosis ..	1	..	..	..	1	..
Chicken-pox ..	2	..	2	..	..	..
Cerebro-Spinal Meningitis ..	1	..	..	..	1	..
Total Treated..	126	142	117	135	9	7

Thus out of 236 cases admitted 16 died, a little more than 6·7 per cent.

A case of small-pox was sent in as scarlatina, and was returned to its home and ultimately died at the Port Sanitary Hospital at New Ferry.

During last year considerable alterations and additions were made to the administration block. The laundry converted from a hand into a steam laundry, and bathrooms added to wards 4 and 5, etc.

The smallpox hospital, containing 44 beds, stands in its own ground, and is provided with a separate administration block, washhouse, mortuary &c., and is entirely distinct from the other hospital.

The following are the statistics regarding

The Smallpox Hospital, 1910.

Number of Patients.	M.	F.	Died.	
			M.	F.
Admitted 1910 ..	0	0	0	0
Total treated during year ..	0	0	0	0

THE E. P. SMITH MEMORIAL CONVALESCENT FUND.

FOR PATIENTS WHO HAVE BEEN TREATED IN THE FEVER
HOSPITAL.

Particulars relating to this fund were given in my Report for 1903.

The following is a list of the initials of the persons who have benefitted by the fund during the year 1910.

February... .. M.H.

February.. .. E.W.

The fund is now regularly used as far as possible.

APPENDIX.

1—Vital Statistics of Whole District during 1910 and previous Ten years.

2—Vital Statistics of Separate Localities in 1910 and previous years.

3—Causes of and Ages of Death during 1910.

4—Deaths of Non-Residents in Public Institutions in Birkenhead during 1910, *not included* in Return.

5—Infantile Mortality during the year 1910.

TABLE I.—Deaths Registered in the County Borough of Birkenhead during the year ending December 31st, 1910, classified according to age.

TABLE II.—Weekly Register of Deaths in the County Borough of Birkenhead for the year ending December 31st, 1910.

TABLE III.—Weekly Condensed Register of Deaths for 1910.

TABLE IV.—Weekly Condensed Register of Meteorological Results for 1910.

TABLE V.—Street Register of Deaths—1910.

SUPPLEMENT TO TABLE V.—Return of Deaths in Birkenhead Union Hospital and Workhouse, registered in 1910.

Vital Statistics of Whole District during 1910 and previous Years.

Year	Population estimated to Middle of each Year	Births		TOTAL DEATHS REGISTERED IN THE DISTRICT				Deaths of Non-residents registered in Public Institutions in the District	Deaths of Residents registered in Public Institutions beyond the District	NET DEATHS AT ALL AGES BELONGING TO THE DISTRICT		
		Number	Rate	Under 1 year of age		At all ages				Total Deaths in Public Institutions in the District	Number	Rate
				Number	Rate per 1,000 Births registered	Number	Rate
